5.0 SPECTRUM UTILIZATION REQUIREMENTS

5.1 System Configuration Requirements

5.1.1 System Configuration Levels

- A. State and Wide-Area Systems - Plans for 821-824/866-869 MHz communications systems at a statewide or similar wide-area level will be submitted to and reviewed by the Region Committee for approval with regard to their overall impact on the Region and compliance with the Region Plan.
- B. County/Multiple-Municipality Systems - The next level of coverage configuration is a county or multiple-municipality area system. Such systems designed to provide county-wide or similar communications coverage must demonstrate their need to require such coverage. If trunked radio technology is utilized, the system design should include as many county and/or multiple-municipality public safety radio users as can be managed technically.
- C. Municipal Level Systems - The smallest configuration level is termed "municipal" and is used to define systems below county-wide level. Municipal communications for public safety purposes must provide only the communications coverage needed within its boundaries.

However, if the total number of mobiles in service does not reach the minimum loading criteria for a trunked system, that municipality must consider utilizing the next higher configuration level if an 800 MHz trunked system is available or planned in the area. As higher-level systems reach loading capacity, the smaller system organizations must consider combining their communications needs into a large consolidated trunked system, or forfeit exclusive use of the limited 821-824/866-869 MHz spectrum.

- D. Portable "Talkaround-only" Systems - This level shall be considered a subset of the aforementioned levels and includes only portable radios operating at no more than 3 watts output power. These systems shall be authorized on a secondary, non-interference basis to primary allotments. Of this section of the Plan (Spectrum Utilization Requirements), such operation shall comply with only sections 5.1.2, 5.1.4, 5.1.7, 5.2 thru 5.2.3, 5.4 thru 5.4.3, and 5.4.5.

5.1.2 CTCSS Requirements

All fixed, mobile and portable equipment operating on 821-824/866-869 MHz channels for conventional (non-trunked) use in the Florida Region are required to utilize a continuous tone-controlled squelch system (CTCSS) in accordance with the latest revision of Telecommunications Industry Association/Electronic Industries Association (TIA/EIA) Standard 603.

5.1.3 Trunking Requirements

All systems operating in the Florida Region having five (5) or more channels (exclusive of the Mutual Aid Channels) are required to be trunked. The maximum number of conventional channels which will be assigned is four (4).

5.1.4 Use of Encryption

The use of encryption on 821-824/866-869 MHz channels is encouraged for those agencies who, as part of their responsibilities, have need to conduct covert operations requiring assurance of communications security. This

Plan recommends encryption techniques providing high levels of communications security and decoded voice recognition.

Encryption systems in the Florida Region are encouraged to be of a digital format with the use of an analog/digital conversion techniques having a bit rate not to exceed that compatible with 25 kHz bandwidth channels. Users who must interoperate with Federal agencies in covert operations will be required to use secure communications complying with National Security Agency Standards. Other standards vary according to end-to-end security classification and the use of any particular scheme must be based upon the sensitivity and nature of information to be exchanged. Many Federal agencies who interoperate with State and local agencies, such as the FBI, US Customs, DEA, and the Coast Guard, are required to use encryption meeting the FIP-S42 data encryption standard.

5.1.5 Capability for Long-Range Communications

During incidents of major proportions where public safety requirements might include the need for long-range communications in and out of a disaster or mass-casualty area, alternate radio communications plans are to be addressed by lead agencies within the Region. Incidents addressed in the National Public Safety Plan such as earthquakes, hurricanes, floods, widespread forest fires or nuclear reactor problems could require the need for such long-range communications.

Lead agencies shall establish communications on the national Mutual Aid Channels as a minimum in accordance with Section 5.3, beginning on page 5-4. However additional means such as amateur radio systems, satellite communications, and appropriate emergency preparedness communications systems or other means must be addressed to enable long-range radio communications.

Interfaces for long-range communications may be by any means - automatic or manually controlled direct retransmission, or by simply repeating messages. Such long-range communications capabilities should be incorporated as an integral part of the communications plans of those lead agencies. Such capabilities will provide the means to communicate outside the area not only for themselves but for smaller agencies who may need assistance as well.

5.1.6 Public Switched Network Interfaces

The use of radio channels for automatic interface to the public switched telephone network (PSTN) will normally require a significantly longer channel occupancy time than normal two-way radio communications, upon which radio channel loading standards are based. Alternatives to PSTN interfaces, such as cellular telephone systems, will not impact radio systems channel loading.

Recognizing that any agency's reduced after-hours activity and staffing may require automatic access to the PSTN in order to contact personnel who are off-duty, this Plan encourages the use of alternatives to PSTN-interconnect in lieu of dispatch center control of access to the PSTN by not allowing any loading consideration for automatic or manual PSTN interconnect service as justification for the number of channels requested.

5.1.7 Federal Interoperability

Interoperability between Federal, State, and Local Governments during both daily and disaster operations will primarily take place on the five Mutual Aid Channels (see Section 5.3, page 5-4). Additionally, through the use of appropriate agreements, a licensee may permit Federal use of a non-Federal communications system. Such use, on

other than the Mutual Aid Channels, is to be in full compliance with FCC requirements for government use of non-government frequencies²¹.

It is permissible for a licensee to increase channel requirements to account for up to a 2% increase in mobile units, provided that written documentation from Federal agencies supports at least that number of increased units.

5.1.8 Channel Loading Requirements

A. General - For loading purposes, the term "mobiles" includes mobile radios in vehicles and aircraft, portable radios, and radio frequency (RF) control stations. Schedule H, item 33 of FCC Form 601 must contain the quantities of mobiles sufficient to justify the number of channels requested. These mobile quantities must also agree with the quantities shown in the Implementation Schedule (See Section 6.1.3.(C)). Mobiles may be counted only once for loading; applicants may not "cross load" another agency's mobiles if those mobiles have already been counted in the loading of the other agency's application or license.

B. Trunked Systems - License applications for trunked systems shall be based on 100 mobiles per channel²² in item 33 of Schedule H on FCC Form 601. Any fraction of 100 mobiles qualifies for one channel, e.g., 400 mobiles qualifies for 4 channels; 401 to 500 mobiles qualifies for 5 channels. Trunked systems may be subject to a loss of channels not loaded to 100 mobiles per channel in accordance with FCC Rules § 90.631.

C. Conventional Systems - License applications for conventional systems shall be based on 70 mobiles per channel²³ in item 33 of Schedule H on FCC Form 601. Any fraction of 70 mobiles qualifies for one channel, e.g., 140 mobiles qualifies for 2 channels; 141 to 210 mobiles qualifies for 3 channels. Conventional systems are subject to a loss of exclusive use of channels not loaded to 70 mobiles per channel in accordance with FCC Rules § 90.633.

5.2 Equipment Technical Standards

Because of the extreme and worsening channel congestion throughout the Florida Region, the following technical standards for radio equipment utilized on the 821-824/866-869 MHz channels are required to minimize interference and provide efficient use of the spectrum.

5.2.1 Transmitter Standards

A. Transmitters possessed (or on order) on or prior to September 7, 1988 may utilize the FCC type-acceptance standards existing at that time for the 806-821/851-866 MHz band with the exception that the transmitter frequency deviation of such equipment must be reduced to +/- 4 kHz²⁴.

B. Transmitters on order after September 7, 1988 shall be FCC type-accepted for operation in the 821-824/866-869 MHz band, and shall meet all technical standards as defined in Part 90 of the FCC Rules and Regulations.

5.2.2 Receiver Standards

Although the FCC did not adopt the NPSPAC recommendation for improved receiver standards, a satisfactory channel allotment plan within the Region could not be achieved and maintained without requiring the use of enhanced receivers.

²¹ See FCC Rules § 2.103 "Government Use of Non-Government Frequencies".

²² See FCC Rules § 90.631 for trunked system loading requirements.

²³ See FCC Rules § 90.625 and 90.633 for conventional system loading requirements.

²⁴ See Memorandum Opinion and Order on Reconsideration, FCC Gen. Docket No. 87-112, adopted July 20, 1988.

- A. Receivers possessed (or on order) on or prior to September 7, 1988 are not required to have the 20 dB adjacent offset-channel selectivity as recommended by NPSPAC.
- B. Receivers on order after September 7, 1988 shall provide at least 20 dB of protection to the adjacent 12.5 kHz offset-channel signal when tested with the revised method described in the NPSPAC Final Report²⁵.

5.2.3 Exceptions

Mobile and portable equipment operating on the five Mutual Aid Channels²⁶ must meet all FCC type-acceptance requirements for the 806-821/851-866 MHz band as a minimum, but are exempted from the requirements of Section 5.2.1 and 5.2.2 above. Fixed station equipment (base, mobile relay, RF control) operating on the Mutual Aid Channels are not exempted.

5.3 Mutual Aid Channel Implementation Requirements

5.3.1 General Implementation Requirements

- A. Region Mobile Relay Coverage - Mutual Aid Channel stations will be designed to provide wide-area mobile relay coverage and geographically assigned to provide continuous mobile coverage throughout the Region. It is anticipated that mobile relay stations on the Calling Channel and at least one Tactical Channel will be established to provide continuous mobile relay coverage throughout the Region. The establishment of Mutual Aid Channel stations is subject to Region Committee approval to insure sufficient coverage and minimum of interference between stations.
- B. Coverage Equivalency - Agencies using or implementing systems in the 821-824/866-869 MHz bands and who are implementing one or more mobile relay Mutual Aid Channel stations shall provide coverage on Mutual Aid Channels at least equivalent to the mobile and portable coverage on their non-Mutual Aid 800 MHz system. This requirement exists for reasons of safety to officers in the field. Stations operating on Mutual-Aid channels are not required to be "simulcast."

If coverage equivalency will not be achieved, then the agency shall outline procedures to overcome the shortcomings of the coverage equivalency between Mutual Aid and non-Mutual Aid Channels, or provide justifications for not meeting coverage equivalency and assume liabilities associated with lack of equivalency.

Prima Facie coverage equivalency will be acknowledged when the Calling Channel and at least one Tactical Channel is implemented identical to the non-Mutual Aid system (i.e., FRIP parameters are the same for both systems). In the event of one or more different parameters between both systems, then a common method (i.e., FRIP, propagation models, field measurements, etc.) shall be used to generate signal contours for both Mutual Aid and non-Mutual system(s) to determine coverage equivalency. Associated contour maps with common method noted shall be provided with the application when the system parameters are not identical.

An agency which plans to utilize a Mutual Aid Channel system which has been (or will be) implemented by others (e.g., a city utilizing an existing county-wide Mutual Aid system) must be aware that the system may not provide coverage equivalency. For example, a county-wide Mutual Aid channel system designed for rural mobile coverage may not provide coverage equivalent to that of a city which plans a system designed for in-

²⁵ See pages 18 & 19 (Technical Design Criteria for Wideband-Offset Equipment) of the Final Report of the National Public Safety Planning Advisory Committee, Gen. Docket 87-112 (September 9, 1987).

²⁶ See Section 5.3 of this Plan.

building portable coverage. In such cases, an agency must either modify or

supplement the mobile relay system to achieve equivalency, or else acknowledge the lack of coverage equivalency in its license application.

Coverage equivalency is **strongly** recommended for agencies using or implementing a system in the 806-821/851-866 MHz band for the same reasons previously stated.

C. Calling Channel (Channel #601) - A watch will be maintained on this channel on a 24-hours-per-day, 7-days-per-week basis. Any agency operating one or more fixed stations on 821-824/866-869 MHz in the Florida Region is required to have the capability to both monitor and transmit on a Calling Channel mobile relay station from its dispatch center. Agencies who do not serve as the Network Control Center (See Section 5.3.4.) for a Calling Channel mobile relay station shall satisfy this requirement by means of an RF control station dedicated to the Calling Channel, or a dedicated wireline (or other approved link) through the Network Control Center. All agencies with Calling Channel capability are required to monitor and be prepared to render assistance on the channel.

D. Tactical Channels (Channels #639, 677, 715, and 753) - Each major user (5 channels or more) of the 821-824/866-869 MHz spectrum will be required to sponsor, individually or jointly, one or more Tactical Channel mobile relay stations (unless all Tactical Channels have been or will be implemented by others in the same area). Depending upon the needs in an area, it is encouraged that multiple channels be implemented. Talk-around on all four tactical channels will provide on-scene communications to supplement the local mobile relay and for use in areas where no mobile relay exists.

Any agency operating one or more fixed stations on 821-824/866-869 MHz in the Florida Region is required to have the capability to both monitor and transmit on all four Mutual Aid Tactical Channels from its dispatch center. Agencies who do not serve as the Network Control Center for one (or more) of these mobile relay stations shall satisfy this requirement by means of separate single-channel RF control stations, a multi-channel RF control station, dedicated wirelines (or other approved links) through the Network Control Center, or some combination of these.

5.3.2 State Agency/Local Agency Implementation

The Joint Task Force on State Agency Law Enforcement Communications (JTF) plans to implement the Calling Channel and 1st Tactical Channel throughout the State. In areas where these have not yet been constructed, local agencies will implement the Calling Channel and 2nd Tactical Channel. When the JTF does construct systems in those areas, the local agency Calling Channel station shall be reprogrammed to the 3rd Tactical Channel. In all cases, the State prefers that the day-to-day control of the channels be done at the local level, normally by the major public safety agency such as a County Sheriff's Office.

5.3.3 Allowable Communications

A. General Limitations - The five Mutual Aid Channels are to be reserved for intercommunication in situations requiring the coordination of multiple public safety entities. They shall not be used for administrative or intra-agency communications unless so directed during a disaster situation. They are designed for use between agencies which have no other common radio communications paths to enable joint operations in emergency or tactical situations. The Mutual Aid Channels are primarily for extraordinary communications between disparate agencies. When a communications function can be considered as routine, repetitive, or covered by an

administrative mutual aid agreement, the five channels should not be considered as the primary link between the agencies.

- B. Eligible Users - Primary participants using the Mutual Aid Channels include local, state, and federal disaster management agencies, as well as providers of law enforcement, fire, and emergency medical services. If sufficient channels are available, other eligibles in the Public Safety Pool may also participate to the extent required to insure the safety of life and property. In a disaster situation, use of the Mutual Aid Channels may be extended to private volunteer organizations whose functions are in coordination with the local disaster management agency.
- C. Use of the Calling Channel - The Calling Channel shall be used only for initial contact with other entities in the Region who can render mutual assistance during an emergency situation. This channel shall not be utilized as an ongoing working channel. Once contact is made between entities, an agreed upon Tactical or other mutual aid channel shall be used for continued communications. Talk-around is not allowed on the Calling Channel.
- D. Use of the Tactical Channels - The four Tactical Channels are reserved for use by entities requiring continuing interagency mutual-aid communications. Incidents requiring multi-agency participation will utilize these frequencies as directed by the controlling agency having the responsibility for an incident or area of concern. The Tactical Channels may be further subdivided into groups for separate use by various public safety services as needed. In a disaster situation, one or more of the tactical channels may be designated as an intra-agency communications channel.

E. Examples of Proper Use of the Mutual Aid Channels

- (1) As working channels for multiple fire departments fighting a fire together.
- (2) For coordination during a police chase through multiple jurisdictions where the agencies have no other communications link with each other.
- (3) For communications during extended joint operations between multiple police agencies such as drug operations, riots, etc.
- (4) For coordination during recovery operations after a disaster such as a hurricane when local, state, and federal officials require a common communications link.

F. Examples of Improper Use of the Mutual Aid Channels

- (1) To support the administrative functions of a fire department which has a mutual aid agreement with an adjacent fire department to provide "move up" capability when a fire unit leaves its own coverage area.
- (2) To provide an extra working channel for a public safety agency supporting a special event.
- (3) To provide a surveillance channel for use between members of the same public safety agency.

5.3.4 Network Control Centers

Each Mutual Aid Channel mobile relay station shall be directly controlled by a local Network Control Center under the jurisdiction of the primary Public Safety agency of that county or area. The primary Public Safety agency in each county or area shall be the County Sheriff's Department or Public Safety Department, unless another agency
